a. Based on atmospheric conditions (stability class and wind speed) that are not exceeded 50 percent of the time.

b. MEI = maximally exposed individual; LCF = latent cancer fatality (probability).

c. Collective dose to the 1.5 million people living within 80 kilometers (50 miles) of the WVDP site.

d. Ground-level release.

e. HIC = High integrity container.

f. RHW^f = Remote-Handled Waste Facility.

g. NA = Not Applicable. Accident scenario could not occur under specified alternative.

Note: Of the 12 accidents analyzed, 5 could occur under any of the three alternatives and 7 could occur only under Alternatives A or B (see Appendix C). The accident impacts shown for the No Action Alternative primarily involve Class A LLW. The accident impacts shown for Alternatives A and B primarily involve Class C LLW.
